

Opening or importing Android project to eclipse.

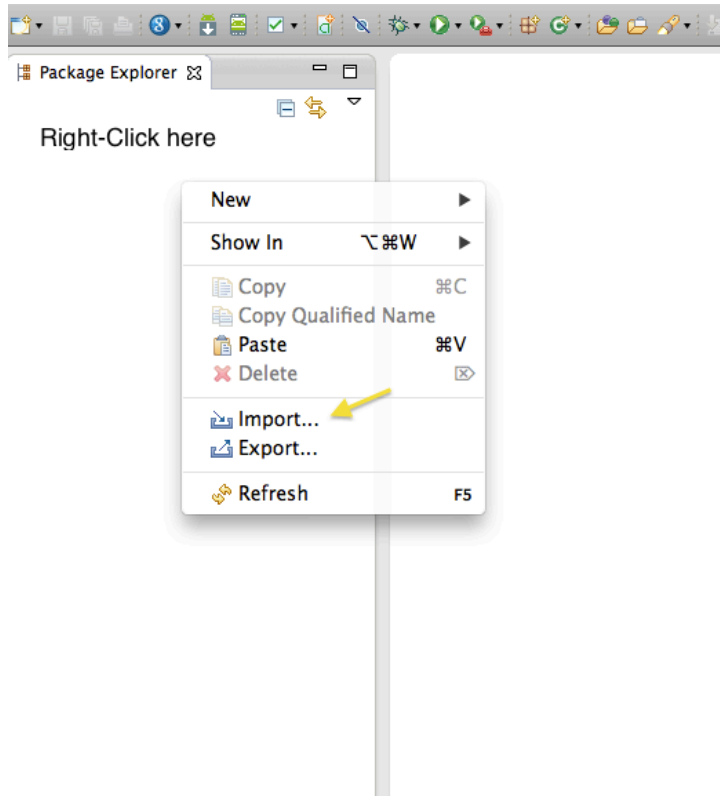

support email: codestore@afoniq.com

1. Download Eclipse and Android plugin as a bundle from:
<http://developer.android.com/sdk/index.html>

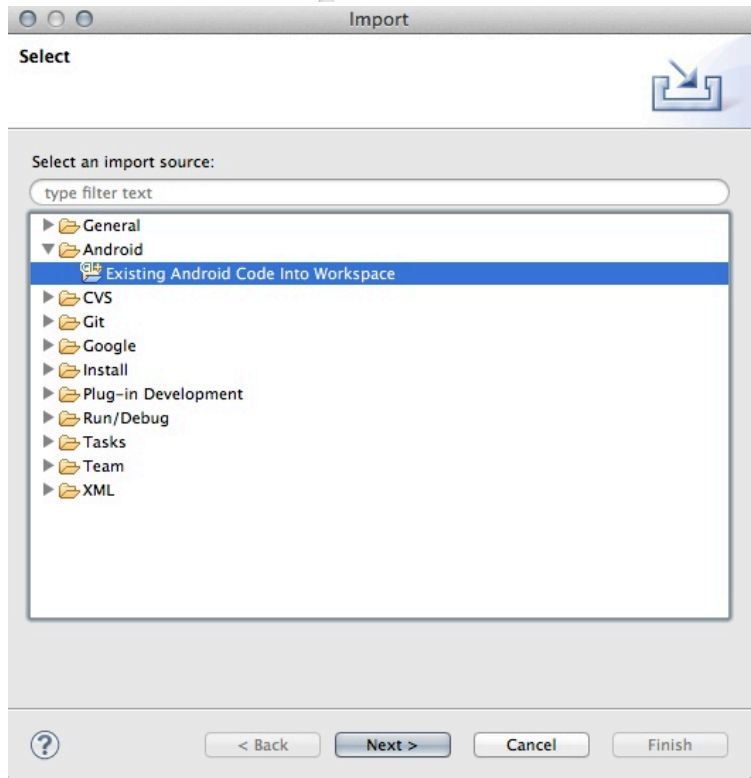

2. Open and install the package.

After downloading the code from codestore, unzip the file and import the project into Eclipse.

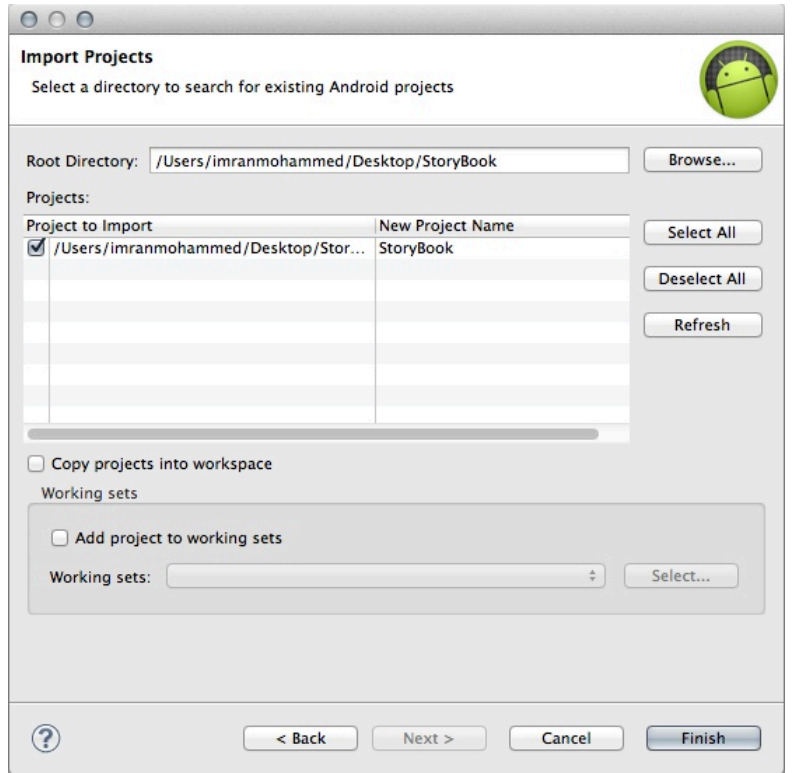

1. Right-Click on the package explorer and click on import.

2. Choose Existing Android Code into workspace and click on next.

3. Browse the application from the directory where the project is unzipped and click on finish.

4. Follow the application specific documentation for the configuring you application.

Thank you for buying the application code from codestore.
